HARDWARE-AS-A-SERVICE

Upgrading desktop and laptop computers is expensive and can overwhelm most nonprofits. Hardware as a Service is a less expensive way to provide your staff with the proper equipment bundled with our unlimited managed services including remote monitoring, anti-virus, on-site technical support, and monthly health checks. Nonprofits are charged a fixed price on a monthly basis, which helps spread the cost over a three year period.

“You stay focused on your cause – We’ll stay focused on your technology”

Reliable Cost Forecasting

Hardware as a Service is offered on a fixed monthly payment, enabling nonprofits to reliably forecast their IT costs over several years. All support, maintenance and repair cost are included in one price.

Up-to-date Technology

Every 36 months, we will replace your computer hardware with brand new equipment that reflects the needs of your organization. As more nonprofits embrace digital media, online software subscriptions, and tablets, the technology they use needs to change with them.

Security and Reliability

Nonprofits rarely have the resources available to maintain their systems, protect their data and keep their systems backed up in the event of a disaster. Our Hardware as a Service solution includes monitoring, anti-virus, and unlimited technical support.
